### **DETAILED ACTION**

# **Application Status**

1. Claims 1-32 are pending in this instant case.

#### Restriction

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, drawn to a method for mapping a site of post-translational modification on a post-translationally modified polypeptide.

Group II, claim(s) 8-16 and 18-26, drawn to a serine protease or an endopeptidase that site-specifically cleaves a peptide bond of post-translationally modified polypeptide at a site of post-translational modification.

Group III, claim(s) 17, 27-32, drawn to an isolated nucleic acid encoding endopeptidase, an expression vector and a host cell.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The inventions are linked by the technical feature of a method for mapping a site of post-translational modification on a post-translationally modified polypeptide comprising site-specifically cleaving a peptide bond of the post-translationally modified polypeptide with an endopeptidase and determining said site of post-translational modification. However, this technical feature is not special because it does not constitute an advance over the prior art by Keough et al. (2000, Rapid Communications In Mass Spectrometry, vol. 14, pages 2348-2356). Keough et al. disclose a method of sequencing of lysine-terminated tryptic peptides after sulfonation of lysine residues of protein and definitive protein identification can be achieved by PSD MALDI sequencing of derivatized peptides obtained from the digestion. The analysis of peptide fragment identified by a mass spec against database (see middle of left column, page 2350), which is encompassed by the limitation of "determining said site of post-translational modification" in Claim 1. The invention of Group I, a method for mapping a site of posttranslational modification on a post-translationally modified polypeptide comprising sitespecifically cleaving a peptide bond of the post-translationally modified polypeptide with an endopeptidase and determining said site of post-translational modification, which is a technical feature, is not required by Groups II-III. The invention of Groups II and III are drawn to a protease and a nucleic acid encoding the protease of Group II, respectively. The invention of Groups II and III has distinct structure and function, because Group II

Art Unit: 1656

and III are comprised of amino acids and nucleic acid, respectively. Therefore, Groups I-III do not share the technical feature of a method disclosed in Group I. Thus, Groups I-III do not relate to a single general inventive concept.

# **Election of Species**

3. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Group I, each post-translational modification is a single species in Claim 2.

Group I, each amino acid is a single species in Claim 3.

Group II, each post-translational modification is a single species in Claim 9.

Group II, each amino acid substitution is a single species in Claims 15, 21 and 25.

Applicant is required, in reply to this action, to elect a single species which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 1656

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Elect one species within the elected Group from Claims 2, 3, 9, 15, 21 and 25.

The following claim(s) are generic: 1, 4-8, 10-14, 16-20, 22-24 and 26-32.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding technical features for the following reasons: Each post-translational modification and each residue from Claims 2, 3, 9, 15, 21 and 25 are different from each other both structurally and functionally and lacks technical features of Claim 1 that is a method for mapping a site of post-translational modification.

#### Election

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Page 6

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

## Notice of Possible Rejoinder

5. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. Process claims that depend from or otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to Application/Control Number: 10/524,608

Art Unit: 1656

be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of In re Ochiai, In re Brouwer and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder.

Page 7

Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Art Unit: 1656

#### Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander D. Kim whose telephone number is (571) 272-5266. The examiner can normally be reached on 8AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kathleen Kerr can be reached on (571) 272-0931. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
